# Admin Report Kit for Windows Enterprise

## Release Notes

### Version 9.1

- **Windows**
  Certain bug fixes and product improvements.
- **Azure**
  - Underlying design changes for certain reports.
  - A few bug fixes.

### Version 9.0

- **Windows**
  Enhanced UI using WPF.
- **Azure**
  New version release.
- **Hyper-V**
  Included only 'VM Reports' feature and not 'VM Performance Analyzer' and 'VM Performance Monitor' features of Vyapin Virtualization Management Suite product (now discontinued).

### Version 8.5

- Provision to enter folder path manually for Export option in Power Export feature.
- Support for using Power Export feature to manage scheduled tasks in Windows 10, Windows Server 2016.

### Version 8.4

- Users can request a permanent license key by filling a form within the application.

## Version 8.2

- Provision to view the members of a trusted domain's group in **Built-in Reports -> Users and Groups -> Group membership with nested groups** report.
- Enhanced the servers/workstations enumeration process to show only the accessible servers at any point of time.
- Fixed the SQL server connection issue while using Windows Authentication option.
- Fixed the issue of not emailing the reports, when more than 99 Shared Folders (UNC paths) are added for reporting.
- Fixed to correct the issue of scheduled task Start Date increment by 1.

## Version 8.1

- New **Group membership with nested groups** report under **Built-in Reports -> Users and Groups** feature showing all the members of a group along with their sub-group members at all levels.
- For easy access to Standard Reports, the report names (tabs) are displayed as sub menu items.
- For all the report windows, the **Refresh** option is updated with **Refresh Domains... and Refresh Data...** options.
- For all the reports, the processing dialog is updated with some useful information like processing host name.
- Enhanced code to verify computer existence for **System Info** reports.
- Print / Print Preview functionality is no longer supported.
- Enhanced to run using **MS Access** option for certain reports under Built-in **Users and Groups** and **Domains** report category that do not support SQL database option.

## Version 8.0

- Supports SQL Database option for generating reports. Provision to create single centralized and separate SQL databases for report generation.
- New Scan Profiles (Shares) - Useful for scanning subset of shares present in computers and save these profiles for repeated use. Mostly useful for permissions type reports.
- Enhancements to certain reports:

    - **Policies - Security Options report**: Includes support for Windows 7, Windows 8, Windows Server 2008 and Windows Server 2012.
    - **User Rights Assignment report**: Reports additional privileges specific to operating systems.
    - **Policies - IP Security report**: Included new **Policy Assigned** and **Last Modified** fields.
    - **System Info - Current Status report**: **Currently Logged on User** field shows users who have logged on remotely.
    - Reports can be exported only in HTML, CSV, XLS and SQL (specific to SQL database option) formats.
- Enhanced to use the Connection Manager credentials for report generation (except Builtin Domains, Users and Groups reports which rely upon windows **Connect As** dialog) and enumeration of shares, computers, users and groups.
- Fix for filter issue that occurs when using less than or greater than conditions on Size column in **Domains - Applications** report.
- Fixed to retain the already saved computers in Scan Profile (Computers) using **Select computers from network** option.
- Fixed the scheduled tasks run failure when there are no Windows logon sessions in the computer.
- Enhanced to include application install location in Add / Remove Programs applet.
- Following reports are removed:
    - **Standard Reports - Shares and Resources**: Disks, Printers, Scheduled Tasks, Current Sessions, Replication, Open Files, Data Sources, Others.
    - **Built-in Reports - Permissions**: List of all permissions for folders (Inherit & Explicit), List of effective permissions for users and groups on folders, List of effective permissions for users and groups on files, List of effective permissions for specific users and groups on folders, List of effective permissions for specific users and groups on files.
    - **Standard Reports** - Registry.
    - **Built-in Reports** - Shares and Resources: List of printers, List of machines with their logical drives and their size, List of scheduled tasks, List of applications installed in a machine.

- **Built-in Reports - Users and Groups**: List of currently logged on users.

## Version 7.4.1

- Evaluation restriction has been changed to 10 records export from the domain restriction.

## Version 7.4

- Ability to search report data by using Find feature.
- Provision to create Scan Profiles (Users/Groups) and thereby generate permission reports on user-defined lists.
- Provision to apply both Scan Profiles (Computers) and Scan Profile (User/Groups) while enumerating Users/Groups from servers.
- Provision for alternative enumeration of servers in a domain using Active Directory Computer accounts (to avoid Browser Service dependency).
- New Connection Profiles feature to maintain credentials in Windows Credential Manager for various connection purposes.
- Introduced Connection Manager to get credential for domains to be used across all computers in a domain.
- Fixed to show alert message while validating Export, Email and Print options in Power Export tasks.

## Version 7.3

- Provision to e-mail the available reports through Interactive and Power Export modes.
- Introduced Scan Profiles option for all Built-in Reports in both Interactive and Power Export modes.
- Support for x64 platform.
- Support for Windows 2008, Windows Vista, Windows 7 (32 bit and 64 bit).
- Fix for missing user's group membership information, when user's Primary group is different from **Domain Users** group.
- Fix for only 32-bit applications listed under **Applications** Installed and Registry reports, because of Registry Reflection.
- Included network connection dialog for Built-in Reports - Shares and Resources.
- Modified to retrieve **Internet Explorer Configuration** report from registry for Windows Server 2008 and later.

## Version 7.2

- Included new enhanced reporting and scheduler components.

## Version 7.1

- Enhanced **Domains - Applications** report with newly added fields (Publisher, Read me, Size).
- Enhanced **Users and Groups - Logon** report to include the Number of Logons made by users.
- Enhanced **System Info - Operating System and Hot Fixes** report with newly added fields (Service Pack, Fix Comments).
- Enhanced **Shares and Resources - Scheduled Tasks** that include fields (Delete if not scheduled again, Start if idle, Stop if ceases to idle, Don't start if on batteries, Stop if going on batteries, Wake computer to run task).
- Enhanced **System Info - Current Status** report to include **Logon Server** field.
- New **Environment Info** report under System Info report category that displays installed OS, system drives, temp folders, application data folders, etc.
- Added new set of Built-in Permissions reports:
  - List of all permissions for folders (Inherited & Explicit).
  - List of effective permissions for users and groups on folders.
  - List of effective permissions for users and groups on files.
- Provision for application launch once installation is complete.
- Fixed to show nested group in **Users and Groups - Group-Members** report for Domain Controllers.
- Fixed to export correctly for all domains added in a Scan Profile for both Standard and Built-in Reports in Power Export (previously, report data is exported for the last domain only due to the same report name).
- Fixed to clean up completely if the application data path contains any extra folder and CSV files, when using entire clean up option.
- Fixed to support Windows 2008 servers for these Built-in Reports - List of Windows Servers, List of Domain Controllers, List of Application Servers, List of machines that run TCPIP services.

## Version 7.0

- Enhanced Policies Reports.
- Upgraded entire product to .NET platform from Visual Basic 6.0.
- New Report Viewer component integrated for export and print features.
- Modified to export same report data in a separate file when exporting for multiple domains using Power Export - Standard reports feature.
- New Uninstall wizard to optionally clean up application worker files (removed old uninstall application).
- Provision to change the folder where the application worker files are stored (previously it was stored in the installation folder).
- Modified to restrict empty password (in Schedule Settings step) in Power Export during edit mode.
