Admin Report Kit for IIS

Reporting tool for Microsoft IIS

Product Overview

Admin Report Kit for IIS (ARKIIS) is a powerful reporting tool for Administrators of Microsoft IIS 7.0 and later. ARKIIS presents IIS 7.0 and later configuration information from the IIS metabase in the form of Trees, Tables, and Views. All categories of information reported by ARKIIS are available across web servers and web sites. This means that information may be viewed and reported for several web servers in the enterprise, simultaneously, from a single server machine. ARKIIS assists in monitoring and tracking IIS configuration information in a certain way that is most suited for efficient administration and reporting requirements, especially web servers that have a large number of web sites, virtual directories and associated configuration settings.

Benefits

- No agent installation. Information on remote IIS servers is collected, processed and displayed on the same machine where ARKIIS is installed.

- Information is conveniently organized into separate Tab Views and Fields. For example, information about all websites and virtual directories and their settings can be seen in a single view, instead of navigating one site or directory at a time.

- Filter unwanted fields and select the desired fields to view.

- Apply powerful conditional queries to get a narrow subset of information.

- Prepare and Print tabular management reports. Webmasters & IIS Administrators will be able to precisely define, view, print and present IIS configuration reports.

System Requirements

For the computer where ARKIIS is installed:

Hardware: Intel Pentium Processor, 512 MB RAM, 20 MB disk space.

Operating System: Windows Server or Client running IIS 7.0 or later with the latest service packs.

Microsoft Data Access Components (MDAC) 2.8 only.

Key Features

✓ **Filter and Customize data -** Powerful Filter and Customize options to track and report only the desired information.

✓ **Export Reports -** Flexible Export feature to export reports from ARKIIS to MS-Access database / HTML / Comma Separated Values (CSV) / XLS/ PDF/ TIFF file format.

✓ **Preview and Print Reports -** Flexible print preview and print options to print the reports from ARKIIS to any local/network printer

Built-in Reports

List of Web Site Reports

- General
- ASP - > Behavior
- ASP - > Debugging
- ASP - > Session
- ASP - > Limits
- ASP - > Cache
- ASP - > Com Plus
- Authentication- > Anonymous Authentication
- Authentication- > Basic Authentication
- Authentication- > Windows Authentication
- Authentication- > Digest Authentication
- Authentication- > Client Certificate Map Authentication
- Authentication- > Forms Authentication
- CGI
- Compression
- Default Documents
- Directory Browsing
- Error Page -> General
- Error Page -> Error Page
- Failed Request Tracing
- Handler Mappings -> Permission
- HTTP Response Headers -> Common Headers
- HTTP Response Headers -> HTTP Response Headers
- ISAPI Filters
- MIME Types
- Modules
- Output Caching -> Caching General
- Output Caching -> Caching Profile

List of ASP.NET settings Reports

- Compilation -> General
- Compilation -> Batch
- Compilation -> Behavior
- Globalization
- Profile
- Trust Levels
- Application Settings
- Connection Strings
- Machine Key
- Pages and Controls
- Providers -> DotNet Profile
- Providers -> DotNet Roles
- Providers -> DotNet Users
- Session State

List of Application Pool Reports

- General
- CPU
- Process Model
- Process Orphaning
- Rapid Fail Protection
- Recycle -> General
- Recycle -> Periodic Restart
- Recycle -> Recycle Event Log
