

Microsoft 365 Manager

Release Notes

Last Updated: Dec 2021

Version 7.0

Product has been rechristened from "Vyapin Office 365 Management Suite" to "Vyapin Microsoft 365 Management Suite" in-tune with Microsoft 365.

General:

1. Changed the module name of "Office 365 Manager" to "Microsoft 365 Manager"
2. Removed the "Migration Planning" module
3. Removed the "Exchange Online Settings" and "Migration Settings" in the Configuration settings.

Microsoft 365 Manager:

- Fixed the update issue in "Manage Users" action due to incorrect reference to access token.

Version 6.1

- Added 'special permissions' management for Calendars in Mailbox folder permissions feature.
- Fixed an issue in emailing report to an on-premises mailbox.
- Fixed to enumerate the list of groups correctly in recipient picker for all group-based reports, in SQL server data storage option.

Version 6.0

- Leverages Microsoft APIs using to read Office 365 data and Azure based app registration, thereby removing PowerShell dependency.
- Support for task-scheduling in Windows 10 by leveraging the latest Windows Task Scheduler API.
- Removed certain obsolete reports in various categories based on customer feedback and lack of API support.

Version 5.2

- Added an option in Provision Users feature to save the given settings as a template.
- Added some of the options in the Provision Users feature to disable Exchange Active Synchronization, OWA for Device and Outlook on the Web (OWA) during user creation.

Version 5.1

- Fixed module licensing issue which caused the Office 365 Manager module link to get hidden, once the evaluation of Migration Planning module has expired.
- Fixed an empty report issue in license matrix report caused by PowerShell authentication changes.

Version 5.0

- Included support for Multi Factor Authentication enabled Office 365 tenant in the application.
- Removed support for x86 machine architecture and MDB data storage.
- Public folder permissions feature to manage permissions on Public folders.
- Provisioning users feature in Manager Module to provision users in O365 tenant.
- Changes in De-provisioning users feature – copy group membership, roles, remove licenses, block sign-in and adding these settings as template.
- Added option in Mailbox Permissions feature to assign custom permissions to user.

Version 4.2.3

- Removed the support for task name with Unicode characters, since it causes issues when the schedule task runs.

Version 4.2.2

- Fixed an issue in schedule task manager that caused the task to fail to run, if the task name consists of additional spaces (ex: task name).
- Removed the support for task name with a dot (.), since it causes issues in schedule task creation.

Version 4.2.1

- Modified the Mailbox folder permissions feature to introduce separate folder permission management for each folder under a mailbox.
- Fixed an issue in running, editing and deleting a task in Task Manager, if the task name includes a dot (.)

Version 4.2

- **Provision** to filter users based on the custom attributes for assigning licenses in **Manage Licenses using rules** feature.
- Added a new report called **OneDrive Provisioned / Non-Provisioned users** under Security Reports category to show the list of users who has their own personal sites and the users who don't.
- **Introduced** a new database option called **Application database** which doesn't require any prerequisite for data storage.
- Added a new feature to copy Exchange role permissions from one user to another under Mailbox Permissions category and Deprovisioning feature.

Version 4.1.1

- Fixed an issue in Copy Task and in User Picker when using the 'Users who have Admin Roles' option under multiple domains case.
- Fixed empty data issue in running the Security reports in schedule mode under multiple domains case.

Version 4.1

- Provision to filter external and internal users in **Security** reports category.

- Fixed an issue in recipient picker to load users from multiple domains in Office 365.

Version 4.0
