

NTFS Security Manager

Release Notes

Version 3.2.1

- Addressed UI scaling issue in higher display resolution.
- Leveraged latest Task Scheduler APIs for better support and improvement in Windows 10 and later.
- Changed 'DAC Reports' wizard to work for Windows 10 and later.
- Fixed to inherit parent folder permissions when using "Replace all child object existing permissions with inheritable permissions" option in Grant Permissions feature.

Version 3.2.0

- Added **Copy Permissions - Advanced** feature. Allows the user to copy permissions from one share to another share(s) by using two options namely, Copy permissions to all subfolder(s) and Copy permissions to specific folders (that match the specified search criteria).

Version 3.1.2

- Support for using Power Export feature to manage scheduled tasks in Windows 10, Windows Server 2016.

Version 3.1.1

- Support for long path folders (exceeding 255 character limit) in all features.
- Included extra folder level options (up to, only and leaf node) to traverse the sub-folders at various levels.

Version 3.1.0

- Introduced a new option – 'Revoke a selected set of account(s) permissions and replace with new permissions from the selected shared folder(s)/file(s)' option in **Revoke Permissions** feature.
- Included **Manage Share Permissions** feature in the NTFS Security Manager Module to manage share permissions of shared folders.

Version 3.0.0

- User Interface enhancements in configuring shares and folders, user/group accounts while managing shared folder permissions.
- Moved Computer Enumeration section from Configuration Settings dialog to individual shared folder enumeration screen.
- Renamed **Domain Credentials** to **Domain/Server Credentials** in the Configuration Settings dialog.

Version 2.4.3

- Copy Account Permissions - Copy permissions of an existing account and grant the same permissions to one or more accounts on shared folder(s) or file(s).
- 'Replace Permissions' enhanced and merged into the newly introduced feature - 'Copy Account Permissions'.
- Performance enhancement in Grant and Revoke Permissions feature.

Version 2.4.2

- Provision to schedule Grant Permissions feature for set of shared folder(s) or file(s).
- Provision to schedule Revoke Permissions feature for a set of shares.

Version 2.4

- Replace Permissions.
- Provision to replace accounts on sub-folders that match the multiple search patterns.

Version 2.3

- Revoke accounts from specified levels of sub-folder(s) and from sub-folders that match the specified search pattern.
- Provision to revoke Orphaned SID's from selected shared folder(s) or file(s).

Version 2.2

- Apply Central Access Policy to the selected shares/folders.

- Revoke Central Access Policy from the selected shares/folders.
- Change History feature updated to view Central Access Policies change history.

Version 2.1

- Grant Permissions on sub-folders and files that do not have inherited permissions from its parent object.
- Copy Permissions to target folder's sub-folders and files that do not have inherited permissions from its parent object.
- Replace accounts on specified levels of sub-folder(s) and replace accounts on sub-folders that match the specified search pattern.
- Revoke permissions from files present inside the selected folders.

Version 2.0

- Copy Permissions.
- Change History to view permissions change history.
- Provision to replace accounts in Modify Permissions.
